

Disinfectant for animal habitats and accompanying buildings

IntraMulti-Des

- Does not cause surfaces to become slippery or greasy
- Suitable for use on all types of surface
- No carrier substance necessary
- Highly effective in all disinfection equipment
- User-friendly
- pH-neutral

IntraCare

Disinfectant for animal habitats and accompanying buildings

Intra Multi-Des

The New way of disinfecting for a very strong price setting. Intra Multi-Des® is being applied successfully.

Production companies in animal husbandry, fish farming, food processing, animal transport, and feed storage, all choose for disinfecting powerful Intra Multi-Des®

In today's production world, an efficient and continuous disinfection is a top priority.

Virulent diseases not only skim the profits away, they can even affect a whole industry. An ounce of prevention is better than a pound of cure !

Where Intra Multi-Des® is being applied, bacteria, viruses, fungi and spores have no chance. Investing in the bio-security of animals, houses, materials, buildings, vehicles and people is a wise managerial decision and leads to better production results.

The bigger and more intensive animal husbandry becomes, the bigger the risk for virulent diseases. There is one all round solution for preventing these devastating risks: Intra Multi-Des®

The bactericidal, virucidal, fungicidal and sporicidal effect of Intra Multi-Des® is unique in the world and is more safe for people, animals and their environment.

Benefits Intra Multi-Des®:

- "hospital grade" disinfectant
- highly efficient to kill bacteria, spores, viruses and fungi
- residual action
- no resistance
- very low dilution rate
- extremely economical cost- in-use
- versatile usage: spraying, foaming, fogging, booth dips, wheel dips
- active at all temperatures
- effective in hard water (even sea water)
- effective in presence of organic matter
- safe for equipment (neutral pH) and environment friendly

Surface disinfection tests:

Staphylococcus aureus, Escherichia coli, Pseudomonas aeruginosa, Proteus mirabilis, Klebsiella pneumonia, Candida albicans, Trichophyton mentagrophytes, Microsporum gypseum

Surface disinfection tests with tuberculosis:

Mycobacterium tuberculosis H 37

Bacteria:

Streptococcus faecalis, Mycobacterium avium, Escherichia coli, Brucella suis

Viruses:
